TITLE : POWER WINDOW DEVICE
INCORPORATING SAFETY DEVICE

ABSTRACT : PROBLEM TO BE SOLVED: To prevent a window glass panel from being imperfectly closed due to an erroneous detection of pinching, to reduce the cost and to reduce the risk caused by releasing a safety device.

SOLUTION: A power window device incorporating a safety device, moves a window glass pane 7 in a vehicle, up and down by means of a motor 25, and carries out a safe control operation when the window glass panel catches foreign matter. In this case, a safety control operation release determining part 43 determines whether a door lock switch 16 for controlling the door lock, is depressed by a safe control operation releasing time which exceeds a predetermined time, in accordance with a lock switch signal from the door lock switch, and releases the safe control operation if the door lock switch 16 is depressed by the control operation releasing time.
